Project Title: Online Movie Store  
Name for the website: Online Movie Store

#### Project Description:

For a member: Once a user signs up or logs in, they have access to movies and to check out a movie they choose. They can filter by genre: horror, comedy, drama etc. or by rating: 1-10. They can also search for any movie title. They can click check out to check out the movie, and they can check the movie back in by the due date. There is no payment/billing functionality in the website for checking out a movie or late returns.

For an admin user: They see the same webpage as the user except there is buttons to add, delete, update or list movies. For an update, to change the image corresponding to the movie, the adminUser needs to provide the image path and make sure that image is in the image folder. For adding a movie, that's where the adminUser can upload the image and it be stored in the image folder. Delete and list all movies is straight forward.
